

Magnum 4500 SD-R

RANDOM

The Highlight Magnum 4500 SD-R is an automatic side belt drive case sealer. Side drives provide the best drive and support for cartons that are longer in length and shorter in height because the side drive belts hold the carton more securely while applying the tape. The 4500 provides accurate, consistent tape application and automatically adjusts to your case sizes. Highlight's 200 series tape head accepts any 2-inch case tape and provides optimum case sealing to the top and bottom of the case. PLC controls with two taping programs improve reliability and speed. Operates at up to 20 cases per minute. Height adjustable legs from 22 inches to 32 inches with locking casters included.
